

Curvaceous in One-Click

Curvaceous Software Limited announces the availability of their new 'One-Click Launch' product for PI. It allows users to move from PI process history data in Excel™ to the Curvaceous Visual Explorer (CVE) multivariable display with one click of the mouse. A click that is well worth making. As C.H, Process Control Manager at Huntsman Petrochemicals UK said

"The Curvaceous guys were telling us things we didn't know about our process in under six hours that we had just spent three months trying to discover."

CVE is a mind-opening application able to show several hundred variables in one graph all at once. This multivariate view of process behaviour includes manipulation features for analysis of every inch of a process. Better Process Setup and operating limits, Process Models without equations and Real Time Operations Control then ensue as much greater process understanding is forged. The methods are visual and non-mathematical and this makes them fast to use for the busy engineer or scientist.

The 'One-Click Launch' is an extension to the existing interactive data clean-up routines in CVE that can carry out all pre-processing of raw data in minutes. This innovative tool enables process engineers to reap the benefits from their history data even more quickly.

Available now, this new function has been developed as a direct response to customer feedback, as Dr. Robin Brooks, Managing Director of Curvaceous Software Limited states,

"We are always listening to our customers and are on the look-out for ways in which we can better assist them. This product is a result of that process."

Already a hit with over seventy process companies including BP, Dow Corning and Aughinish Alumina, Curvaceous' novel technology products are proving that benefits such as improved quality, higher yield and reduced waste really are only one-click away.

Curvaceous Software Limited is a rapidly expanding UK technology company providing intelligent solutions to process optimisation and control problems. Holding the European Process Safety Center's Award for the 'Biggest Contribution to Improving Process Safety', the Curvaceous Team is continually developing and upgrading c:suite products to better suit consumer needs.

For more information regarding Curvaceous' Geometric Process Control (GPC) technology please contact +44 (0) 1753 893090, email enquiries@curvaceous.com or visit www.curvaceous.com.
